[LinkedIn](#) | [GitHub](#) | [Kaggle](#) | [Portfolio](#)

PROFILE

Computer Science undergraduate at UIT focused on applied artificial intelligence and machine learning. Curious and self-driven, with hands-on experience in time-series forecasting, data-centric model development, information retrieval, and deployed RAG applications; seeking an AI/ML Engineering or Data Science internship in Ho Chi Minh City.

EDUCATION

University of Information Technology (UIT), VNU-HCM

B.Sc. in Computer Science

Ho Chi Minh City, Vietnam

Sep 2024 - Expected 2028

GPA: 8.6/10 | English Proficiency: VNU-EPT B2.1

TECHNICAL SKILLS

Languages: Python, C++, SQL, JavaScript

Machine Learning: PyTorch, scikit-learn, LightGBM, XGBoost, pandas, Polars

RAG & Retrieval: Gemini API, FAISS, BM25, embeddings, PEFT/LoRA

Development: FastAPI, React, Vite, REST APIs, Redis/Upstash, Git, Vercel, Render

SELECTED PROJECTS

UIT Knowledge Retrieval Chatbot | Gemini, FAISS, FastAPI, React

May - Jun 2026

AI Engineer | 3-member team | [GitHub](#) | [Live Demo](#)

- Built the Vietnamese RAG pipeline using Gemini embeddings and FAISS over 274 curated chunks from 84 official UIT webpages, with separate university-wide and department-specific knowledge indexes.
- Tuned L2 similarity-threshold filtering to reject low-relevance retrievals and improve the quality of context passed to Gemini.
- Implemented Gemini API rate-limit handling and Server-Sent Events streaming to maintain stable requests and progressively display generated responses.
- Developed the JavaScript/React interface, integrated it with FastAPI, and deployed the frontend on Vercel and backend on Render; won Third Prize among 15 DEV-O Hackathon finalist teams.

AgriSmart Agricultural Marketplace | Gemini 2.5 Flash, Flask, React, SQLite

Mar - Jun 2026

AI & Full-Stack Developer | Individual Project | [GitHub](#) | [Live Demo](#)

- Implemented a stateful seller workflow in Flask using Gemini 2.5 Flash structured JSON outputs to classify intent and extract five listing fields (crop, location, quantity, price, standard), normalize units, and compare seller prices with SQLite market-price data.
- Built a human-in-the-loop publishing transaction: session-specific state retains partial fields, Gemini generates a structured listing payload and marketing copy, React renders a preview, and explicit confirmation triggers product insertion into SQLite through REST APIs.
- Developed the React/Flask marketplace integration for product search and filtering, market-price lookup, authentication, and seller listings; deployed the interactive frontend demo on Vercel.

Face Recognition System | RetinaFace, ArcFace, InsightFace, ONNX Runtime

May - Jun 2026

Computer Vision Contributor | 7-member team | [GitHub](#)

- Implemented the team's RetinaFace + ArcFace branch with InsightFace (buffalo_s) and ONNX Runtime: padded oversized-face inputs, performed landmark-based alignment, extracted L2-normalized ArcFace embeddings, and matched identities with cosine similarity plus open-set rejection.
- Built per-identity prototypes by averaging and re-normalizing training embeddings; evaluated at a 0.50 similarity threshold on 50 test images across 5 identities, achieving 100% face detection, accuracy, precision/recall, and macro-F1.

SELECTED COMPETITION EXPERIENCE

CLEF 2026 CheckThat! Lab - Scientific Document Retrieval

May 2026

Retrieval Research Contributor | 4-member team | Ranked 12th/42 teams | [Leaderboard](#)

- Fine-tuned e5-large-v2 and BGE dense retrievers with PEFT/LoRA and contrastive learning; evaluated BM25-dense hybrid search, HyDE, hard-negative mining, and listwise reranking.
- Designed document-chunking experiments and contributed the Methodology, Dataset, and Experimental Setup sections to the team scientific report.

EXACT 2026 International Data Science Competition

Jun 2026

Neuro-Symbolic AI Contributor | 4-member team | Top 28/180 teams, Round 2 | [Leaderboard](#)

- Developed a Qwen-7B/8B and Z3 neuro-symbolic pipeline that translated natural-language reasoning problems into SMT constraints and verified candidate answers through satisfiability checks.
- Implemented robust JSON and logic parsing, syntax-error recovery, iterative hypothesis testing, and fallback handling for LLM-generated Z3 code across multiple-choice and yes/no tasks.

ADDITIONAL AWARDS

Hedge Fund Time-Series Forecasting (Kaggle) - Ranked 7th/982 teams | [Leaderboard](#)

Apr 2026

Mastering IT 2026 - HCMUTE - Top 5 Finalist & Consolation Prize (56 qualifying teams)

May 2026

SPD Challenge 2026 - First Prize

2026
